

Immersion Sensors

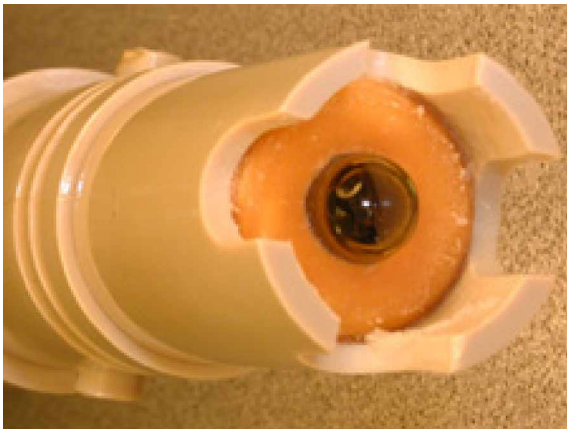

Rugged line of 3/4"-3/4" & 3/4"-1" MNPT pH & ORP sensors for in-line and standpipe applications. Available for slurry/viscous, sulfide, high-temperature, cyanide, organic applications and many other difficult process applications. ASTI sensors are unsurpassed in any mining applications.

Valve Retractable Sensors

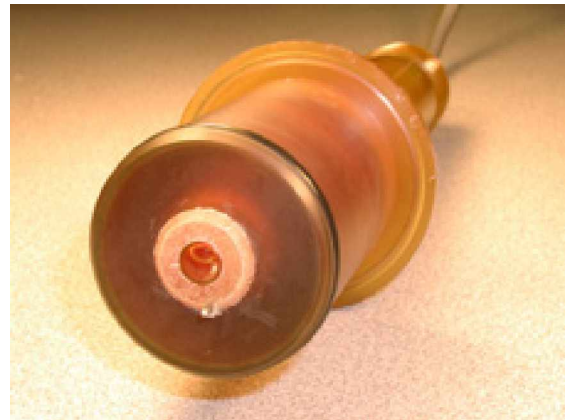

1" O.D. Valve Retractable sensors with blow-out protection for pH & ORP measurement. For use with 1-1/4" Ball Valve assemblies, or compression fittings only. Please see Single and Double Ball Valve Pages for available Mating Valve Retractable Hardware.

Twist Lock Sensors

Convenient Twist Lock Sensors (with mating rugged inline receptacles) are perfect for high maintenance pH, ORP applications requiring frequent cleaning or calibration. Twist Lock sensors are also well suited to tricky Ion Selective measurement requiring periodic calibrations.

Sanitary Sensors

These solid state Sanitary Sensors are ideal for aggressive food and beverage processes requiring CIP cleaning. The solid state reference is highly resistant to dehydration and our thick wall glass is nearly impervious to cracking, even under high temperature pressure conditions. Precise pH glass is well suited for measurements requiring high accuracy and reproducibility.
